2	7												
3	9												
4	11												

VERBALLY	ALGEBRAICALLY												
The area of a circle is a function of its radius	$A(r) = \pi r^2$												
NUMERICALLY	GRAPHICALLY												
<table border="1"> <thead> <tr> <th>in radius</th><th>in<sup>2</sup> Area</th></tr> </thead> <tbody> <tr><td>-2</td><td><math>4\pi</math></td></tr> <tr><td>-1</td><td><math>\pi</math></td></tr> <tr><td>0</td><td>0</td></tr> <tr><td>1</td><td><math>\pi</math></td></tr> <tr><td>2</td><td><math>4\pi</math></td></tr> </tbody> </table>	in radius	in <sup>2</sup> Area	-2	$4\pi$	-1	$\pi$	0	0	1	$\pi$	2	$4\pi$	
in radius	in <sup>2</sup> Area												
-2	$4\pi$												
-1	$\pi$												
0	0												
1	$\pi$												
2	$4\pi$												

#### Function Notation

$$f(x) = 9 - 4x$$

$$\begin{aligned} \text{a. } f(-3) &= 9 - 4(-3) \\ &= 9 + 12 \\ f(-3) &= 21 \end{aligned}$$

$$\begin{aligned} \text{b. } f(x) &= 10 \\ 10 &= 9 - 4x \\ 1 &= -4x \\ -\frac{1}{4} &= x \end{aligned}$$

$$\begin{aligned} \text{c. } f(h) &= 9 - 4(h) \\ &= 9 - 4h \end{aligned}$$

$$\begin{aligned} \text{d. } f(x+2) &= 9 - 4(x+2) \\ &= 9 - 4x - 8 \\ f(x+2) &= 1 - 4x \end{aligned}$$

Mr. Bean enters a 7 day Pokémon competition. The function below models Mr. Bean's total cards over the tournament.  $C(t) = \frac{1}{3}t^3 - 2t^2 - 2t + 50$ .

$t$  = time in days

$C$  = # of Pokémon cards

What does  $C(3)$  mean? Find it.  $C(3) = 35$

How many cards does he have on day 3? 35 cards

What does  $C(t) = 40$  mean? Estimate it.

When does he have 40 cards? Day 2.085 and 6.181.

What does the y-intercept mean?

How many cards did he start with? 50 cards

What is the lowest amount of cards that Mr. Bean had?

about 30.870

X	Y1
0	50
1	46.333
2	40.667
3	35
4	31.333
5	21.667
6	38

X	Y1	n
201	2.63E6	
47	30146	
26.875	5022	
25	-6358	

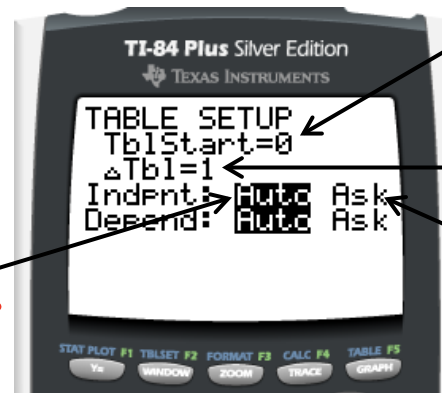

## CALCULATOR

### ZOOM

6: ZStandard = 10 units in all directions

0: ZoomFit = desperation

### TBLSET (2<sup>nd</sup> WINDOW)

what x counts by

you type in x-values

Calculator puts in x-values

Mr. Brust has a one day layover in Vegas. He decides to gamble continuously for that time period. The following function represents his total money over that day where  $t$  is measured in hours.

$$B(t) = -0.02t^4 + 19t + 180$$

$B$  = \$

$t$  = hours

What does  $B(12)$  mean? Find it.  $B(12) = -6.72$

How much money does he have at hour 12? He owes \$6.72

What does  $B(t) = 80$  mean? Estimate it.

At what hour will he have \$80? 11.180 hour

What does the y-intercept mean? What does the x-intercept mean?

How much money did he start with?

When will he lose all his money?

What is the most money that Mr. Brust had?

\$268.23

## SUMMARY:
